#### PROCESSING

The tomatoes are carefully selected, washed and subjected to parboiling, chopping and centrifugation, until obtaining a clear juice free of skins and seeds. The juice is then heated and undergoes the concentration process, through the removal of water by evaporation in concentrators under vacuum. After heat treatment of the product, which guarantees that its flavour and appearance characteristics are maintained, and at the same time guarantees its hygienic condition, it is then dosed into tinfoiled tins which are sealed, and cooled after a suitable "controlled temperature" rest
